

Daisy Cooper

I had ChatGPT create an apple and told it to make the apple move randomly while also utilizing the WASD keys. Although it made what I asked it didn't make exactly what I made. My shapes move randomly while ChatGPT's apple moves all together and the movement is a bit janky. It moves randomly every 2 seconds and you're able to move it around with the WASD keys but the movement is still very janky and doesn't move smoothly like the one I created.

The code is also very different and more complicated than what I did. It used a lot of code I never used before. The code I made was more simpler and easier to understand than what ChatGPT created.
